

Plant Daddy for Apple Vision Pro

Jan 16, 2024

Ogden, Utah — Jordan Hipwell today announced Plant Daddy will be available for Apple Vision Pro, Apple's revolutionary spatial computer, beginning February 2. Plant Daddy is a simple and modern app that helps you care for your plants, featuring gorgeous photos and timely notifications to let you know when it's time to water each one.

Plant Daddy is optimized for visionOS and spatial computing in version 3.1. The grid layout displays plants in a beautiful window that shows essential information for each plant — its name, photo, when it needs to be watered next, an optional location, and a button to mark it watered. The app also supports opening a plant in a new window, allowing you to arrange it your space, for example, to place it directly by the plant in your room.

Plant Daddy for Apple Vision Pro includes all of the features users love from the iOS app, including iCloud sync and backup, robust Shortcuts support for powerful automation, Siri integration, and full accessibility support.

With support for this new platform, Plant Daddy is now available for iPhone, iPad, Apple silicon Macs, and Apple Vision Pro. No matter which device or devices you use, Plant Daddy is the perfect companion for proud plant plants everywhere.

Since its release in 2020, Plant Daddy has made it simple and easy to keep track of your plants. You can quickly add a plant, give it a name, a lovely photo, custom notes such as care instructions or soil needs, plus any other desired information such as the date planted, its scientific name, and location. Set how often you'd like to water your plant and a notification will be sent when it's watering time. It's that easy.

Plant Daddy is free to download and use with up to 4 plants. An in-app purchase, All The Plants!, is available to add an unlimited number of plants. An option to tip the developer and support future development is available as well.

Plant Daddy 3.1 will be available to download from the App Store alongside the Apple Vision Pro release. More information about Plant Daddy can be found at plantdaddy.app. The Plant Daddy app is developed by Jordan Hipwell, an independent developer from Utah.
