

Plant Daddy 3.0 Announced

Sep 10, 2023

Ogden, Utah — Jordan Hipwell today announced Plant Daddy 3.0, a major update to the iOS application. Plant Daddy is a simple and modern app that helps you care for your plants, featuring gorgeous photos and timely notifications to let you know when it's time to water each one.

Plant Daddy 3.0 introduces many new features users will love:

- A redesigned grid layout showcases more plants on screen at once.
- Interactive widgets allow you to mark your plants watered right from your Home Screen, Lock Screen, StandBy, and widgets added to your Mac from iPhone.
- Siri can mark plants watered for you using phrases like “Water Snake Plant in Plant Daddy.”
- Robust Shortcuts support enables powerful automation capabilities with several actions including Create Plant, Edit Plant, Find Plants, Water Plant, and more.
- iPad support brings optimization for the large display, including support for Split View, Slide Over, Stage Manager, and multiple windows.

These features alongside others such as dark mode, customizable app icons, iCloud sync, and full accessibility support make this the perfect companion app for plant daddies everywhere.

Since its release in 2020, Plant Daddy has made it simple and easy to keep track of your plants. You can quickly add a plant, give it a name, a lovely photo, custom notes such as care instructions or soil needs, plus any other desired information such as the date planted, its scientific name, and location. Set how often you'd like to water your plant and a notification will be sent when it's watering time. It's that easy.

Plant Daddy is free to download and use with up to 4 plants. An in-app purchase, All The Plants!, is available to add an unlimited number of plants. An option to tip the developer and support future development is available as well.

Plant Daddy 3.0 will be released on the App Store alongside iOS 17 and be available for devices running iOS 16 or newer. More information about Plant Daddy can be found at plantdaddy.app. The Plant Daddy app is developed by Jordan Hipwell, an independent developer from Utah.
